3 Update

Take the following steps to update Autek Ikey 820 device:

- 1) Connect device to PC through USB cable;
- 2) Open Autek Ikey 820 Update Tool in your PC that needs to be on internet;
- 3) Select the device in list and input the SN (usually completed automatically);
- 4) Click UPDATE button to start updating, wait until the updating completed.

Auttek Ikey 820

There is something you need to notice in each step.

- 1) The device should display “USB SD DISK MODE” when connected to PC through USB cable, if not, please unplug the USB cable and plug again. Do not unplug the USB cable or exit from USB SD DISK MODE.
- 2) If Auttek Ikey 820 Update Tool is not installed, please install it first, see detail in chapter 2.
- 3) The DISK and SN should display automatically if the device is connected to PC. If the DISK has no device to select, please unplug the USB cable and plug again. If the DISK has been selected, but SN is empty, please unplug the USB cable and plug again. If it’s still the same, please input SN yourself. The SN should start with “A-”.
- 4) It may take several minutes to update, it depends on the speed of your internet.

If there is any problem, it will display on message area, check according to the message and try again.

Here are the pages for updating. The SN is just an example, you should use your own SN.
